**FINANCIAL AND COMMERCIAL.**

THE MONETARY stringency in England  
and on the European continent caused by  
the large withdrawals of gold for the use  
of this country was the one dominant in-  
fluence in all the great financial markets  
of the world to-day. The drain of gold  
that has taken place from Europe has, of  
course, been almost entirely addressed  
to London, but its effects have been felt  
no less in Paris and Berlin. Including  
to-day's engagements our takings of gold  
amount to over \$40,000,000, and it is not  
conceivable that any one financial centre  
or any number of them, no matter how  
strong their reserves of cash might be,  
would consent to such a loss of ready money  
in a brief space of time without making  
every possible effort to prevent it. In the  
judgment of our best bankers here as well  
as of intelligent financial observers every-  
where our country has pushed its demands  
for gold in Europe just as far as can be  
done without bringing on such a state of  
strain abroad as must in due course affect  
our concerns altogether unfavorably. Within  
little more than a week all of the huge  
sums of money that have been secured in  
Europe for our benefit will be landed on  
our shores, making possible an extension  
of bank credits here in the neighborhood  
of \$175,000,000. This, with the increase  
in bank note circulation which is now reach-  
ing surprisingly large figures and with the  
gradual disappearance of the premium  
on currency which was to-day plainly per-  
ceptible, ought to relieve existing diffi-  
culties with at least short order. To-day,  
although the foreign market was not  
altogether so favorable as it might have  
been, as well they might be, by the specu-  
lation of a simultaneous advance in the  
Bank of England's minimum discount rate  
to 7 per cent., in the Bank of France's rate  
to 4 per cent., and in that of the Bank  
of Belgium to 4 per cent., coupled with the  
weighty absolute certainty that the rate  
of the Imperial Bank of Germany will be  
elevated to-morrow from 5 1/2 to 7 1/2 per  
cent., these acts resulting in the sale here  
of over 30,000 shares of stock for foreign  
account, our own market was by no means  
as weak as might have been expected.

Indeed, prices on the Stock Exchange  
sustained the brunt of the foreign selling  
with notable firmness and only succumbed  
later in the day to liquidation in two or three  
quarters originating in causes of a seem-  
ingly temporary nature.

The rise in the discount rates of so many  
of the foreign national banking institutions  
to-day was of course the more empha-  
sized because of the extreme rarity in  
modern financial history of the prevalence  
of such rates for accommodation as were  
charged. A 7 per cent. minimum discount  
rate of the Bank of England has not been  
seen since the troublous times of 1873, and  
a higher rate than that of 4 per cent. The  
Bank of France has not been imposed by the  
Bank of France but once before in the last  
two decades.

The result of the American withdrawals  
of gold were made visible this morning  
in the weekly statements of the two institu-  
tions named. The Bank of England's  
proportion of reserve to liabilities fell from  
39.81 to 35.20 per cent. The Bank  
of France, although its cash holdings were  
reduced over \$6,000,000, enforced reduction  
of nearly \$40,000,000 in its loan account;  
and happily, despite this impairment of  
cash reserve, the condition of both the  
Bank of England and the Bank of France  
is still relatively so strong that if the banks  
are allowed to accumulate the gold that  
will flow from now into their coffers  
in the natural course of events they will  
speedily find themselves in an entrenched  
position and will undoubtedly as quickly  
relax those defensive measures that they  
have recently been forced to adopt. It  
was a welcome sign to-day that the Bank  
of England, while it was compelled to part  
with \$1,300,000 in gold for export to this  
country, yet bought \$6,000,000 gold in the  
open market; and it is surely not an un-  
pleasant feature of the entire existing  
financial situation that the gold production  
of the world still maintains the rate of  
increase that it has established in recent  
years, which results in the laying down  
of gold in London each week to the amount  
usually of several million dollars. It is  
also very gratifying to observe that our  
people are quickly availing themselves of  
other expedients of relief in the present  
abnormal condition of affairs. Cashiers'  
checks for small sums are readily passing  
for currency in many interior sections, cham-  
bers of commerce in different cities are  
making arrangements to supply the farmers  
with money with which to move the crops  
and the premium on currency is itself dis-  
appearing under larger offerings of hoarded  
money. It is perfectly obvious that if  
the financial community manages to keep  
its head during the short time further that  
must elapse before all the gold now pointed  
to this country arrives here this pre-  
mium will in a few days entirely vanish.

In the afternoon to-day prices of stocks  
weakened under some selling of the United  
States Steel sinking fund 5 per cent. bonds,  
which were almost everywhere in demand  
on account of the floating supply of the  
bonds caused by yesterday's purchase  
by the Steel Corporation of Tennessee  
Coal and Iron stock. The announcement  
by the directors of the American Cotton  
Oil Company that they had decided to defer  
for the present the declaration of an annual  
dividend on their company's common stock  
was also interpreted adversely, although  
the circumstance by no means deserved  
such a construction. The American Cotton  
Oil Company, which is the oldest industrial  
corporation of the kind in the country and  
has long been known as one of the best  
managed, has ended an exceedingly pros-  
perous business year, making net earnings  
equivalent to a dividend on its common  
shares of 8 per cent. or of 6 1/2 per cent.,  
after a deduction of over \$400,000 as an  
extraordinary improvement fund. The  
company wisely decided not to make a  
distribution at this time in view of the  
existing money market conditions. It is  
wholly probable, however, that when these  
conditions once more approximate the  
normal a distribution on Cotton Oil com-  
mon will be made at an even larger rate  
than that of the previous year.
